

World Wide Book

Website Assignment using PHP and mySQL

My list of PHP Files :

- IndexPage.php

This is the main page where everyone viewing the website will see initially.

- login.php

This file checks the login Username and Password are correct from mySQL and if true then sends to main.php file

- loginPage.php

This is what the user see when to login which has TextFields and Login Button

- main.php

The main page one logged in

- register.php

Register file to create new user, where they are required to file in certain details such as unique username, and input address and phone number and has the user input password twice to insure the password is what they wanted and sends to the database.

- registerPage.php

UI page when they input their details which sends to the register.php page

- reserve.php

MySQL page where it retrieves from the databases all books the user has reserved, and also to unreserve the book option which deletes from the reservation database, and puts available on the books table.

- reservePage.php

This file is used to display whats it in the reservation table and show the button to unreserve.

- search.php

Retrieves search variables to retrieve from the database table books. Whatever the user inputs to search for, it has mySQL retrieval query to take back all what is same as what the user searches for.

- searchPage.php

This page is for the user, to input what he/she wishes to search by. The options are by category which are radio buttons, search by typing in the authors name or book title and also part of the name can be entered.

- searchReserve.php

This is just a mySQL file where the search.php will send the book to reserve to, this file just has the query to send to the database to that the user wants to reserve a book, and also puts unavailable on the books table so no other user can by mistake reserve that book.

- unregister.php

The unregister pages sends command to database to delete use from user the User table and also all reserve books.

- unregisterPage.php

Where the user can say click yes to be deleted from the database.

- unreserve.php

This is where if the user clicks to unreserve a book from the reservePage, it remove that reservation from the reservation table.

- view.php

Retrieves all books from database and displays it in table from.

- viewPage.php

Display the query to shows all books on the database.

- styles.css

This is the css sheets which holds the options for each div, text colour, text positions etc.

- footer.php

holds the footer text, which is copyright with my name and year

- dbConnect.php

Is included in queries to database php files to make the connection to the database.

Login Page with error checking:

The screenshot shows a web page titled "World Wide Book" with a light blue header. Below the header, there are two buttons: "Login" and "Register". To the right of these buttons is a form titled "Input Username and Password". The form contains two input fields: "Username" and "Password". Both fields have red asterisks next to them, indicating an error. Below the "Password" field is a "Login" button. At the bottom of the page, there is a copyright notice: "Copyright © 1988-2014 Timothy Bernard".

Input Username and Password

 * *

Username or Password is invalid

```
session_start(); // Starting Session
$error=''; // Variable To Store Error Message
if (isset($_POST['Submit'])) {
    if (empty($_POST['USERNAME']) || empty($_POST['PASSWORD'])) {
        $error = "Username or Password is Invalid";
    }
    else
    {
        // Define $username and $password
        $username=$_POST['USERNAME'];
        $password=$_POST['PASSWORD'];

        // Establishing Connection with Server by passing server_name, user_id and password as a parameter
        $connection = mysql_connect("localhost", "root", "root1988");

        // To protect MySQL Injection for Security purpose
        $username = stripslashes($username);
        $password = stripslashes($password);
        $username = mysql_real_escape_string($username);
        $password = mysql_real_escape_string($password);

        // Selecting Database
        $db = mysql_select_db("bookWeb", $connection);

        // SQL query to fetch information of registered users and finds user match.
        $query = mysql_query("select * from Users where Password='$password' AND Username='$username'", $connection);

        $rows = mysql_num_rows($query);

        if ($rows == 1) {
            $_SESSION['login_user']=$username; // Initializing Session
            header("location: main.php"); // Redirecting To Other Page
        } else {
            $error = "Username or Password is Invalid";
        }
        mysql_close($connection); // Closing Connection
    }
}
```

User Enters their login credentials and the information is passed to login.php file where it checks the databases to see if they are password and username are correct

The image shows two screenshots of a web application interface. The left screenshot displays a 'Register' page with a 'Login' button and a 'Register' button. The right screenshot displays a 'Login' page with a 'Register' button. Both pages feature a form titled 'Input your Details' with various input fields and error messages.

Register Page (Left):

- Buttons: Login, Register
- Form Title: Input your Details
- Fields: Username, Password, Retype Password, FirstName, LastName, AddressLine1, AddressLine2, City, Phone No, Mobile.
- Error Messages: * required field. (next to Username, Password, Retype Password, City, Phone No, Mobile).
- Submit Button: Register

Login Page (Right):

- Buttons: Login, Register
- Form Title: Input your Details
- Fields: Username, Password, Retype Password, FirstName, LastName, AddressLine1, AddressLine2, City, Phone No, Mobile.
- Error Messages: * required field. (next to Username, Password, Retype Password, City, Phone No, Mobile); * Name is required (next to Username); * Password is required (next to Password); * First Name is required (next to FirstName); * Surname is required (next to LastName); * Address Line 1 is required (next to AddressLine1); * Address Line 2 is required (next to AddressLine2); * City is required (next to City); * Telephone is required (next to Phone No).
- Submit Button: Register

This Register Page is for the user to enter their details, and also checks to ensure they put all the required fields. If they leave any out then they are not logged in and shown where, also checks to ensure both passwords are the same.

```
<div id="mainBody">
  <h5>Input your Details</h5>
  <p><span class="error">* required field.</span></p>
  <form method="post" action="">
    Username: <input type="text" name="USERNAME">
    <span class="error">* <?php echo $nameErr; ?></span><br>

6 of 11

The search page allows the user to search by Author , Book Title and Category, either each of them or all together. On the search page, the required books are shown and has a button to allow the user to reserve a book.

ISBN	BookTitle	Author	Edition	Year	Category	Reserve
093-403992	Computers in Business	Alicia ONeil	3	1997	3	<input type="button" value="Reserve"/>
82n8-308	Computers for Idiots	Susan ONeil	5	1998	4	<input type="button" value="Reserve"/>

Once the user clicks to reserve, and all is good, then they are sent to the reserve page where is displays all books the user has reserved.

ISBN	Username	Reserve Date	Unreserve
093-403992	collegboi	2014-11-27	<input type="button" value="Unreserve"/>

After which if the user wishes to unreserve a book, then they click unreserve, and makes the book available for any other user.

```

if(isset($_POST['unreserve']))
{
    $isbn = $_POST['isbn'];
    session_start();
    $username = $_SESSION['login_user'];
    $sql = "DELETE FROM Reservations WHERE ISBN = '$isbn'";
    // Selecting Database
    mysql_select_db("bookWeb");
    $retval = mysql_query($sql, $conn);
    if( !$retval ) {
        //die('Could not get data: ' . mysql_error());
        $error = "Could not Unreserved Item";
    } else {
        mysql_free_result($retval);
        $sql = "UPDATE Books SET Reservation = 'N' WHERE ISBN = '$isbn'";
        $retval = mysql_query($sql);
        if(!$retval) {
            $error = "Unreserved";
        }
    }
    mysql_free_result($retval);
    mysql_close($conn);
}

```

There is also a view page on which display all books in the database or library, it only displays 5 books per pages which is required.

ISBN	BookTitle	Author	Edition	Year	Category	Reserved
093-403992	Computers in Business	Alicia O'Neil	3	1997	3	Available
23472-8729	Exploring Peru	Stephen Birchie	4	2005	5	Available
237-34823	Business Strategy	Joe Peppard	2	2002	2	Available
23u8-923849	A Guide to Nutrition	John Thorpe	2	1997	1	Available
2983-3494	Cooking for Children	Anabelle Sharpe	1	2003	7	Available

[Next 5 Records](#)

The first time you view, you are prompted to view the next 5 records.

ISBN	BookTitle	Author	Edition	Year	Category	Reserved
82u8-308	Computers for Idiots	Susan O'Neil	5	1998	4	Available
9823-23984	My Life in Picture	Kevin Graham	8	2004	1	Available
9823-2403-0	DaVinci Code	Dan Brown	1	2003	8	Available
9823-98345	How to Cook Italian Food	Jamie Oliver	2	2005	7	Available
9823-98487	Optimising your Business	Cleo Blair	1	2001	2	Available

[Last 5 Records](#) [Next 5 Records](#)

On the last page, it only displays last 5 records.

ISBN	BookTitle	Author	Edition	Year	Category	Reserved
98234-029384	My Ranch in Texas	George Bush	1	2005	1	Available
988745-234	Tara Road	Maeve Blinchy	4	2002	8	Available
993-004-00	My Life in bits	John Smith	1	2001	1	Available
9987-0039882	Shooting History	Jon Snow	1	2003	1	Available

[Last 5 Records](#)

```

if( $page == 0 && $rec_count > 5)
{
    echo "<a href=\"$_PHP_SELF?page=$page\">Next 5 Records</a>";
}
else if( $page < $rec_count / $rec_limit - 1)
{
    $last = $page - 2;
    echo "<a href=\"$_PHP_SELF?page=$last\">Last 5 Records</a> |";
    echo "<a href=\"$_PHP_SELF?page=$page\">Next 5 Records</a>";
}
else if( $left_rec < $rec_limit && $rec_count > 5)
{
    $last = $page - 2;
    echo "<a href=\"$_PHP_SELF?page=$last\">Last 5 Records</a>";
}

```

This piece of codes checks which of the Last 5 records or Next 5 records is shown

The database on which I created via shell has 4 tables, Users, Books, Reservations and Category.

```
